

FOR IMMEDIATE RELEASE

Immgenuity Inc. To Present Data on IMTV014 at USCHA 2023

Dover, Delaware, July 9, 2023 – Immgenuity, a biotechnology company focused on developing innovative immunotherapies, will present a poster abstract on its lead therapeutic IMTV-014 at the US Conference on HIV and AIDS (USCHA), to be held in Washington, DC from September 6 to September 9, 2023.

Immgenuity’s therapeutic vaccine platform, led by IMTV-014, is based on a unique approach that harnesses the immune system to target and eliminate HIV-infected cells. The vaccine is designed to boost the immune response to the virus and induce a sustained control of the virus in patients with HIV. The company’s approach is differentiated from traditional antiretroviral therapy, which requires lifelong treatment and does not provide a cure. The approach is also different from traditional therapeutic vaccines for HIV in that it uniquely addresses restoration of immune signaling.

“Our abstract titled ‘Targeting HIV-1 accessory protein Nef to achieve remission’, was accepted as a poster at USCHA and will be presented in the topic category of Novel Treatments and Vaccines. USCHA is a globally recognized conference that brings together the scientists, NIH officials, government officials engaged in HIV programs and community leaders.. Needless to say we are excited to present our therapeutic vaccine platform at the USCHA”, said Sateesh Apte, MD, CEO of Immgenuity, Inc.

The USCHA Conference is a renowned gathering of scientists, community leaders, researchers, and US Government officials in the field of HIV research and therapy. The conference provides a platform for sharing the latest scientific advancements, clinical trials, and breakthroughs in the field of HIV/AIDS.

About Immgenuity, Inc.

Immgenuity, Inc. is a biotechnology company dedicated to developing innovative immunotherapy solutions to improve the lives of patients suffering from HIV. The company’s lead product candidate is IMTV014, a novel immunotherapy for HIV and NeuroAIDS, which has shown to be safe in preclinical studies. Immgenuity, Inc. is headquartered in Dover, Delaware and is led by a team of experienced biotech professionals with deep expertise in infectious diseases, immunology, virology, and drug development. About IMTV014

Immgenuity’s immunotherapy, IMTV014 is a genetically modified HIV virus which is unable to block immune signaling like the natural HIV does. By restoring immune signaling, IMTV014 plans to activate the immune system to create a strong, viable immune response against HIV and likely lead to clearing the virus even from the sanctuary areas where the virus persists despite aggressive anti-HIV drug treatment. IMTV014 will also address various neurological and cardiovascular comorbidities caused by the virus persistence in these anatomical sanctuary areas via prolonged and elevated secretion of inflammatory cytokines. IMTV014 also has application as “salvage therapy” in the multidrug resistant population.
